The Faculty of Medicine in Foča has developed a set of digital support systems for international students and staff. The idea is to integrate international students studying in the Medicine in English study program into society in general, but primarily into the faculty, as soon as possible. The reason is that international students come from different continents, and understanding the local context, in which international students must perform clinical practice and work with local patients during their education, is extremely important.

On the other hand, the Faculty of Medicine wants to develop these digital support systems to attract a larger contingent of young people around the world who want to study Medicine in English, and who were exceptionally high-quality high school students. What is even more important is that it is necessary to gain the trust of parents/guardians of children who enroll in Medicine in English, precisely through the opportunities offered by internationalization at home. Internationalization at home must provide international students and staff with trust, a desire to visit, security, information and support upon arrival.

The experiences of domestic students in exchange programs are an added value, so that foreign students, in addition to coming from afar to study Medicine in English, can be further stimulated to go a step further in an exchange program in one of the European or world countries as students of the Faculty of Medicine in Foča.

On the website of the faculty <http://mef.ues.rs.ba/> in the Studies in English register, there is International cooperation, within which the following elements are available, which are treated as Digital protocols for international students and staff:

- Brochure for incoming students and staff,
- Information about accommodation, stay, hospital departments where internships can be carried out,
- Safety and security guide,
- Buddy program,
- Exchange experiences from abroad.
